Control

Does your AI tool need a DPIA?

A 9-question screening under GDPR

1 **Does it evaluate or score people, including profiling?**

2 **Does it make automated decisions with legal or similar effects?**

3 **Does it systematically monitor people?**

4 **Does it process sensitive or highly personal data, like financial data?**

5 **Is the processing large scale?**

6 **Does it combine data sets from different sources?**

+ 3 more inside

Part 1 of 2

Screening questions (1 of 2)

1 It evaluates or scores people, including profiling ✓

2 It makes automated decisions with legal or similarly significant effects ✓

3 It systematically monitors people ✓

4 It processes sensitive or highly personal data, such as financial data ✓

5 The processing is large scale ✓

Part 2 of 2

Screening questions (2 of 2)

6 **It combines data sets from different sources** ✓

7 **It concerns vulnerable people, including employees** ✓

8 **It uses new technology in a new way** ✓

AI often meets this criterion on its own.

9 **It could prevent people from accessing a service, such as credit** ✓

Rule of thumb from the guidelines: two or more criteria usually mean a DPIA is required. Your DPO decides. This is practical guidance, not legal advice.

Do this week

Your first step

Run each AI use case through these nine questions with your DPO. It takes an hour and avoids a lot of surprises.
