Control

When do you have to tell people AI was involved?

The EU AI Act transparency rules, made practical

1 **Client-facing chatbots**

2 **Deepfakes**

3 **Published AI text on public matters**

Swipe for the full checklist

by **Christophe Atten**

Part 1 of 3

Map where AI meets clients and the public

1 **List client-facing chatbots and assistants**

2 **List AI-generated content sent to clients**

3 **List AI-generated content published externally**

Website, reports, social media.

Part 2 of 3

Check disclosure

1 **Clients are told when they interact with an AI system**

Unless it's obvious from the context.

2 **AI-generated or manipulated images, audio or video that look real are disclosed**

3 **AI text published on matters of public interest is disclosed, unless a human reviewed it and holds editorial responsibility**

Part 3 of 3

Keep it current

1 **A named owner checks new client-facing AI uses**

2 **Transparency rules checked against current guidance**

They have applied since August 2026; the AI Omnibus did not delay them.

Some obligations fall on providers of AI systems, others on deployers. Confirm which apply to you with your compliance team.

Do this week

Your first step

List every place where clients or the public might interact with AI or read AI content from your organisation. Then check whether disclosure is in place.
