What you can and can't paste into an AI tool

GDPR, on one page

Swipe for the full checklist

by **Christophe Atten**

Never paste, unless explicitly approved

1 **Client names, account numbers, IBANs**
Identifiable client data needs an approved setup and a legal basis.

2 **Employee data: salaries, reviews, sick leave**
HR data is personal data, often sensitive.

3 **Special category data, such as health information**
Extra protection under GDPR.

4 **Inside information and unpublished results**
Market abuse rules apply on top of GDPR.

5 **Passwords, keys and access details**
Never, in any tool.

Part 2 of 3

Fine in an approved tool

1 **Aggregated figures without identifiers**
Totals by entity, month or cost centre.

2 **Anonymised samples**
Check that people can't be re-identified.

3 **Public documents and regulations**

4 **Your own drafts, templates and structures**

by **Christophe Atten**

Part 3 of 3

Four checks before every paste

1 **Is this tool approved for this data?**
Check your organisation's approved list.

2 **Did I remove names and identifiers?**

3 **Is this the minimum data I need?**
GDPR data minimisation.

4 **Will I check the output before using it?**

This is a practical guide, not legal advice. Your organisation's policy and your DPO have the final word.

Do this week

Your first step

Share this with your team and ask which item surprised them. Their answers show you where the training gap is.
