Type	**How-to**

Swipe for the 5 steps

REVIEWED
for finance teams

1

Triage the list

Paste the request list and ask Claude to group requests by theme, owner and likely source system. You'll see the duplicates immediately.

Prompt to copy Paste the full request list.

```
Here is the auditors' request list: [PASTE]

Group the requests by theme, likely owner and
likely source system.
Flag requests that look like duplicates or
variations of the same question.
Output a table: request ID | theme | owner |
source | possible duplicate of.
```

2

Map each request to evidence

Ask for a table: request, document needed, owner, due date. This becomes your tracker.

Prompt to copy Builds your tracker.

```
For each request, suggest the document or report
that would answer it.

Output a table: request ID | evidence needed |
owner | due date [I'LL FILL] | status.
Mark requests where the evidence is unclear with
[ASK].
```

Step 3 of 5

3

Draft the cover notes

For each evidence pack, ask for a short note explaining what's included and how it answers the request. Auditors work faster with context.

Prompt to copy Auditors work faster with context.

```
For request [ID], here is the evidence we plan to
provide: [DESCRIBE]

Draft a short cover note (max 80 words) explaining
what is included and how it answers the request.
```

Step 4 of 5

4

Find the gaps early

Ask: "Which requests can't be answered with the documents listed?" Better to find out in week one than in week four.

Prompt to copy

Week one, not week four.

```
Based on the evidence mapping, which requests
cannot be fully answered with the documents
listed?

For each, say what is missing and who is most
likely to have it.
```

Step 5 of 5

5

Prepare for follow-ups

Ask which requests are most likely to trigger follow-up questions, and why. Prepare those answers now.

Prompt to copy The likely second questions.

```
Which ten requests are most likely to trigger
follow-up questions from the auditors, and why?

For each, suggest what we should prepare in
advance.
```

One rule

> **The request list is usually fine in an approved tool. Client-level evidence and personal data are not. Keep those out.**
