Control

AI literacy under the EU AI Act in 6 steps

It already applies

Swipe for the full checklist

by **Christophe Atten**

Part 1 of 3

Know who uses AI

1. **List AI users by team and by tool**
   Include AI features inside other software.
2. **Note what each team uses AI for**
   Drafting, analysis, client-facing, decisions.

by **Christophe Atten**

Part 2 of 3

Tailor the training

1. **Define training levels by role**
   A reviewer of AI output needs more than an occasional user.
2. **Cover what the tool does and where it fails**
3. **Cover the data rules**
4. **Cover how to review output**
5. **Cover who to ask and how to escalate**

Part 3 of 3

Make it stick

1. **Use real examples from your own work**
   Show one good and one bad output.
2. **Record who was trained, when, on what**
   Simple records are enough.
3. **Set a refresh date**
   At least yearly, sooner when tools change.

Take into account staff's technical knowledge, experience, education and the context the AI systems are used in, as Article 4 describes. Check details with your compliance team.

Do this week

Your first step

List who uses which AI tool. Most teams are surprised by the answer.
